

nEXT 240, 300 and 400 TURBOMOLECULAR PUMP

edwardsvacuum.com

The nEXT240, nEXT300 and nEXT400 are innovative pumps, providing compact, high-vacuum performance where flexibility is key. With a range of variants to choose from they have been designed to meet the needs of OEM's, scientific research as well as UHV applications.

nEXT240, nEXT300 and nEXT400 are available in two variants:

'D' pump variant combine turbo and drag stages

'T' pump variant includes Edwards unique fluid dynamic stages, with the option for additional booster ports where increased system rationalisation is needed.

Split Flow variants are also available in three sizes where additional for further optimisation of your vacuum system.

Designed for use in UHV and analytical applications, the 'A' variant is also an option for the nEXT300 and nEXT400 pumps. These models employ a Holweck design, improving light gas compression ratios as well as backing pump pressure tolerances, and making them the go to choice for UHV environments.

FEATURES AND BENEFITS

- Replaceable bearing assembly and oil cartridge
- Low power consumption and standby mode
- Compact design ideal for high product density environments
- Range of variants available for tailor made and flexible deployment
- Edwards patented direct impeller temperature measurement technology for increased operating envelope
- Compatible with Edwards nST software for monitoring, and range of communications protocols
- Full suite of accessories
